Birse Rail Launches New Consultancy Business

Leading civil engineering contractor, Birse Rail, is delighted to announce the launch of its own independent consultancy business to serve rail sector customers.

Birse Rail Consultancy has been providing in-house design services to the Birse Rail Framework business since 2005 but now that the team is operating independently, it can offer its specialist services and expertise to other rail customers throughout the UK.

The business, which works within the Birse Rail trading entity, was recently ranked within the top thirty UK rail consultancies and currently boasts over 30 full time professionals at three locations. The Redhill based team is headed by Design Associate Richard Storey, with fellow Design Associate Simon Moon heading both the Birmingham and Manchester based teams.

Recent successes include the new bridge deck TSB20 over the Stratford-on-Avon Canal, temporary works for the refurbishment and reconstruction of Footbridge 706 at Falmer station and the refurbishment of the Grade II Listed Bridge 62a over Gloucester Street in Manchester (pictured).

Commenting on the launch, Birse Rail's Managing Director Chris Montgomery said: "As a Consultancy that has evolved within a contracting organisation, Birse Rail Consultancy is in the unique position of offering D&B contractors a thorough understanding of their specific needs, helping to manage them through the Network Rail technical approval processes. By working closely with the contractor, we can offer truly buildable and practical design solutions".
